# Transmission POLICY

October 2, 2014

## Object

Establish the principles and guidelines for the design, implementation, construction, operation and maintenance of the power transmission facilities. These principles and guidelines shall lead to the fulfilment of the strategies and objectives of the Red Eléctrica Group.

## Scope of application

Red Eléctrica Group.

## Basic principles and guidelines

- Apply the principles of excellence adopted by the Red Eléctrica Group and incorporate and promote best practices in the field of power transmission.
- Achieve the maximum availability of transmission capacity under adequate reliability and quality conditions at the lowest cost.
- Evaluate and report on the technical and economic feasibility and efficiency of transmission facilities proposed for grid development planning.
- Design, construct, commission, operate and maintain the facilities foreseen in the planning so that they have the least environmental and social impact, seeking the cooperation of the authorities and affected stakeholders and a greater social acceptance throughout the life of the facility.
- Garantizar la seguridad de las personas y de las instalaciones
- Ensure the health and safety of people and safety & security of facilities in all electricity transmission activities, adopting best practices regarding safety matters.
- Ensure connection to the transmission grid under the principles of neutrality, agility and efficiency.
- Comply with the instructions issued by the System Operator in its role as the transmission system operator.
- Ensure compliance with the regulations in the field of design, construction, operation, modification and closure of transmission facilities.
- Establish technical standards for installations in the transmission grid that, in line with best engineering practice, guarantee the protection of people and the integrity and functionality of assets that may be affected by the installations; the quality and regularity of electricity supply; the maximum technical and financial use of the installations and the protection of the environment.

- Seek the maximum economic efficiency, without compromising quality of service, in the design, construction, operation and maintenance of the transmission grid.
- Develop a telecommunications network based on optical fibre, which ensures the quality of the telecommunications services necessary for an efficient operation and maintenance of the transmission grid, while ensuring that the services contracted by third parties are provided.

This **Transmission Policy** was approved by the Management Committee on October 2, 2014.
